### Oral Nutritional Supplementation in Cancer Patients Who Were Receiving Chemo/Chemoradiation Therapy: A Multicenter, Randomized Phase II Study

**Authors:** Cecilia Helena Peinado de Sampaio Mattos, Evandro Airton Sordi dos Santos, Natael Ribeiro Malta Neto, Raquel Pedro Moreira, Luciara Tonelo Batella, Hellin dos Santos and Ana Paula Monnerat Celes

**Introduction:** Oral nutritional supplementation (ONS) in cancer patients is justified by the low food intake caused by several factors. However, ONS can be affected by adverse events (AEs) correlated to treatment. This study aimed to compare the safety and efficacy of ONS (whey protein isolated, leucin, zinc-IMMAX®) during oncologic treatment.
